Current Position

Postdoctoral Researcher on the FAST project

Limerick, Ireland

University of Limerick

Feb. 2022 - Present

- Develop novel, computationally efficient statistical models and algorithms for the modelling of multivariate sensor data.
- Demonstrate increased computational efficiency, so that the methodologies are applicable to modern, large-scale datasets.
- Supervisor: Norma Bargary (UL) and Andrew Simpkin (NUI Galway)

Experience

Data Scientist on the EMPOWER project

Paris, France

IRMES (Insep)

Jun. 2021 - Jan. 2022

- Maximize the performance of elite female athletes by optimizing their training responses with adapted workloads in synergy with their physiology and menstrual cycle.
- Develop statistical models to determine athletes hormonal profiles and analyze responses to training and competition loads.
- Link: https://labos-recherche.insep.fr/fr/empower

Research Engineer

Guyancourt, France

Technocentre, Renault

Jan. 2018 - Mar. 2021

- Develop clustering methods for the analysis of autonomous vehicle Advanced Driver-Assistance Systems data.
- Create a Python package for Functional Data Analysis: FDApy.
- Use of Google Cloud Platform (Compute Engine and BigQuery) for the analysis of vehicle data.
- Software: Python and **R**.

Data Scientist (Intern)

Guyancourt, France

Technocentre, Renault

Apr. 2017 - Oct. 2017

- Implement a massive data analysis methodology for the validation of driving assistance systems.
- Software: Matlab.

Research Assistant

Fort Collins, USA

Colorado State University

Jun. 2016 - Aug. 2016

- Compare survey estimators for the *National Survey of College Graduation*.
- Software: **R**.

Education

PhD. in Applied Mathematics, Statistics

Guyancourt, France

Technocentre, Renault and CREST (Ensai)

Jan. 2018 - Jun. 2021

- **Title:** Statistical methods for multivariate functional data
- **Supervisors:** Valentin Patilea (Ensai, CREST), Nicolas Klutchnikoff (Univ Rennes, IRMAR)
- **Funding:** Partnership with Groupe Renault through a CIFRE convention.
- **Abstract:** The topic of this thesis is related to functional data analysis and is motivated by modern data from automobile industry. The standard functional data methods rely on the assumption that the curves are continuously observed, without error. However, in general, the real data is neither continuously nor exactly observed. Therefore, a crucial step is to recover the trajectories from noisy measurements at discrete random points. For that, we propose an original point of view: the local regularity of the process generating the curves. Thus, combining information both within and across trajectories, we propose a simple estimator for this local regularity. Given this estimate, we build a nearly optimal local polynomial smoother of the curves from a sample of noisy trajectories. Nonparametric estimators for the mean and the covariance functions of functional data, using the local regularity of the process, are derived. Moreover, we propose a model-based clustering algorithm for a general class of functional data for which the components could be curves or images. Results of both simulated and real data show the good performances of this method. A Python package, implementing the methods and publicly available, has been developed.
- **Keywords:** Adaptive optimal smoothing, functional data analysis, gaussian mixtures, Hölder exponent, local polynomials, model-based clustering, multivariate functional principal component analysis, traffic flow.
- **Defense**: June 18, 2021 in front of the jury composed of André Mas (Professor, Montpellier University, President), Sophie Dabo-Niang (Professor, Lille University, Reviewer), Alois Kneip (Professor, Bonn University, Reviewer), Vincent Feuillard (Statistical Expert, Renault, Examiner) and Claire Gormley (Professor, University College Dublin, Examiner).
- **Manuscript**: tel-03540827

MSc in Big Data — *Rennes, France*

Ensai (National School for Statistics and Data Analysis) — *Sept. 2016 - Oct. 2017*

- Dual degree program with Ensai engineering degree.
- Main topics: Statistics, Applied Mathematics, Computer Science.
- Training topics: assess, treat, and analyze massive amounts of heterogeneous data.
- Program taught entirely in English.

M.S. in Statistics (*Diplôme d'ingénieur*) — *Rennes, France*

Ensai (National School for Statistics and Data Analysis) — *Sept. 2014 - Oct. 2017*

- Training topics: Statistics, Econometrics and Computer Science.

Statistics of random processes — *Aarhus, Danmark*

Aarhus University — *Jan. 2016 - Jun. 2016*

- ERASMUS exchange.

CPGE MPSI/MP — *Reims, France*

Lycée Clemenceau — *Sep. 2011 - Jun. 2014*

Skills

Programming Python, **R**, Bash

Tools Google Cloud Platform, Git, Continuous Integration

Languages French (mother tongue), English (C1, fluent)

Teaching Experience

R for Statistical Data Science — *University of Limerick*

MS6071 — *Sep. 2023 - Dec. 2023*

- Link: r-programming-course.netlify.app

Engineering maths 5 — *University of Limerick*

MA4006 — *Feb. 2023*

- Vector fields and integration.

Duration models — *Ensai*

M.S in Statistics — *Apr. 2021 - Jun 2021*

- Theoretical and practical (with **R**) sessions.

Linear regression — *Ensai*

M.S in Statistics — *Sep. 2019 - Nov. 2021*

- Theoretical and practical (with **R**) sessions.

Scientific production
